NEW FROM QUOOKER: THE CUBE

We proudly present the newest innovation from Quooker: CUBE. Equipped with a CUBE the Quooker tap provides filtered chilled and sparkling water alongside 100°C boiling, cold and hot water.
All from one tap!
The tap that does it all offers all the familiar advantages of a Quooker. It delivers water at true 100°C, saves time, water, energy and space and now also means you no longer need to buy plastic bottled water. Great for the environment!
The childproof double push-and-turn handle, insulated spout and fine aerated spray ensure no risk of scalding or burning.
You can now enjoy a glass of refreshingly filtered chilled water or make delicious lemonades and cocktails with that added sparkle!

SUITS EVERY QUOOKER-SYSTEM

The CUBE has been designed so it can be added to any Quooker system.

By adding a CUBE any Quooker system will provide the additional convenience of filtered chilled and sparkling water.

EASY TO USE AND MAINTAIN

Push-wait-turn and the tap ring will light up blue for a flow of filtered chilled water. Push-turn and the tap ring will flash blue for a flow of filtered sparkling water. The CUBE is installed in the kitchen cabinet next to the Quooker tank. The CUBE is attached to a CO_2 cylinder that provides you with 60 litres of sparkling water from your Quooker tap. We supply one CO_2 cylinder as standard. When the water jet slows down and there is less carbon dioxide in the water, it means that the CO_2 cylinder needs to be replaced. These are easily ordered at quooker.co.uk. Used cylinders are returned to Quooker free of charge for refilling. The CUBE is equipped with an active carbon filter and a hollow fibre filter. Both filters together ensure a better water quality because they filter bacteria, chloride, chemicals and pesticides from the water. They have a lifespan of 12 months.
